

High Pass Filter

(Sharpening)

1. Duplicate the layer
2. Go to **Filter>Other>High Pass**
3. In the dialogue box that will open move the slider at the bottom of the box to the right hand side, so that you have a radius of **3** in the box just above the slider. The image will take on a greyish appearance.
4. Now go to the layers pallet and at the top left where you find a box saying **Normal** click on it and from the drop down menu select either **Overlay** or **Soft Light**
5. You should now have a sharper image.
